

# Your team's new **AI assistant**, working where your business already runs.

A custom AI assistant that talks to your data, reads your documents, builds reports, and delivers them automatically — right inside WhatsApp, Slack, Telegram, or your own web platform.

Talk to your database

Document intelligence

Automated PDF reports

Email delivery

Embeds in your product

## WHAT IT IS

# One assistant. Every routine task, handled.

It's not another chatbot that just answers questions. It's a working assistant that takes action on your behalf — querying business systems, analyzing files, generating polished documents, and sending them out. Your team simply asks in plain language, and the work gets done.

### Talk to your data

Ask questions about your business in plain English. The assistant queries your database, interprets the results, and replies with clear insights — no SQL, no dashboards.

### Document intelligence

Send a PDF or spreadsheet and get an instant summary, key figures, and answers to follow-up questions — ideal for contracts, reports, and statements.

### Automated reports

Turn raw data into professional, branded PDF reports on demand. Executive summaries, tables, and insights generated in seconds.

### Delivery on autopilot

Once a report is ready, the assistant emails it to the right people automatically. Request to delivered inbox — all in one conversation.

## HOW IT WORKS

# From request to result in three steps.

01

### Ask

Your team writes a normal message in the channel they already use every day.

02

### Act

The assistant connects to your systems, runs the task, and prepares the output.

03

### Deliver

It replies with the answer, attaches the report, and sends it onward if needed.

SEE IT IN ACTION

## Real conversations, real output.

The same assistant works across every channel your business uses. Here it answers a data question, builds a report, and emails it — entirely through chat.

Slack — top-customer analysis on request

## Lives inside the tools your team already opens

- ✓ WhatsApp, Slack & Telegram — no new app to learn
- ✓ Responds in seconds, around the clock
- ✓ Understands plain language in any language
- ✓ Keeps context across the whole conversation

## EMBEDDED EXPERIENCE

# Or build it right into your own platform.

Beyond messaging apps, the assistant can be embedded directly into your web product as a context-aware helper — reading the screen the user is on and acting on it instantly.

Drop **embedded.png**  
into the **/assets** folder

## A native assistant inside your app

It already understands the page in front of your user. They can ask for a quick summary, consolidate figures, or generate a downloadable PDF — without leaving the screen.

- ✓ Reads on-screen context automatically
- ✓ One-click quick actions for common tasks
- ✓ Generates structured PDF reports to download
- ✓ Matches your brand and product look

Drop **embedded2.png**  
into the **/assets** folder

Example: an embedded assistant summarizing records and producing reports inside a live business platform.

## WHERE IT FITS

# Built for the work that eats your team's day.

### Legal & Compliance

Summarize cases, consolidate exposure across records, and generate risk reports on demand.

### Finance

Query figures, build statements, and email period reports without touching a spreadsheet.

### Sales & CRM

Surface top customers, revenue trends, and pipeline answers in seconds.

### Operations

Pull inventory, orders, and performance data straight from your systems.

### Customer Support

Answer account questions and deliver documents instantly, 24/7.

### Back Office

Read incoming documents, extract data, and route polished reports to the right inbox.

## 24/7

Always on — no breaks, no queues

## Seconds

From request to finished report

## 100%

Tailored to your data & brand

## Let's build yours.

Every business is different — so every assistant is. Tell us the tasks that slow your team down, and we'll deliver an assistant that handles them, on the channels you already use.
